

Node Management Master

Welcome to the documentation for Node Management Master plugin, A tool for easily aligning and selecting Blueprint nodes

Current Plugin Version: v1.0

The plugin is available on the Fab Marketplace:

<com.epicgames.launcher://ue/Fab/product/afd58bb1-7009-4fb3-a370-c98db9e15241>

This plugin does not require any settings and is ready to use

- There are two shortcuts, each corresponding to a different function
- Please select an execution node, not a pure function node
 - Press **A** to align the current node and all subsequent nodes, including execution nodes and pure function nodes. When a pure function node has multiple input nodes, it will not be adjusted but will move along with the execution nodes
 - Press **S** to select this node and all subsequent nodes, including execution nodes and pure function nodes. This feature is particularly useful when you need to move all nodes after this one or add a comment

Wish you a great experience! Happy Coding!!! Happy Life!!!
